Bridge repair on U.S. Highway 84 over Chattahoochee River near Gordon

MONTGOMERY, Ala. – The Alabama Department of Transportation would like to advise motorists that beginning Monday, April 24, weather permitting, a bridge repair project in Houston County will begin.

ALDOT will utilize the hydroblasting method to make repairs to the bridge deck on the Chattahoochee River bridge on U.S. Highway 84, southwest of Gordon.

There is no detour in place but lane closures will be in place so motorists should plan accordingly for possible delays and be mindful of the people and equipment in the work zone. Due to the lane closure no wide loads will be permitted.

The approximately \$2.5 million project was awarded to Gibson and Associates, Inc., out of Balch Springs, Texas, who had the lowest bid that met the project requirements. The project is expected to be completed in Summer 2024.
