## *SECTION 1*

# INTRODUCTION

### **1 Introduction**

On December 6, 2011, the Alabama Department of Environmental Management (ADEM) and the Alabama Department of Transportation (ALDOT) executed a “Settlement Agreement for Voluntary Response” (the “Agreement”) which set out the site response actions for assessment and remediation of the Coliseum Boulevard Plume (CBP), an area in Montgomery, Alabama where the groundwater contains concentrations of trichloroethylene (TCE) (the Site). On March 10, 2015, the Agreement was revised and updated to document the implemented remedial responses and monitoring activities approved by the ADEM. The Agreement requires ALDOT to operate and maintain approved Corrective Measures at the Site, conduct comprehensive monitoring of groundwater and surface water, and report annually the status and results of all investigations and corrective measures.

This 2016 Annual Report presents data collected and analyzed, and the status of engineering and institutional controls in calendar year 2016.

## SECTION 2

### INSTITUTIONAL CONTROLS

## **2 Institutional Controls**

In July 2009, ADEM approved an Institutional Control Program (ICP) as one component of a comprehensive remedial and management plan to be implemented within the Institutional Control Boundary (ICB) of the CBP. This plan was revised by ALDOT in September 2014 and approved by ADEM on November 25, 2014, contingent on a 45-day public notice. The ICB defines the total area of the 2006-delineated area of TCE-contaminated groundwater, the additional area predicted to become contaminated from horizontal expansion of the plume by calendar year 2036, plus an additional 100 feet. The ICP combines legal, administrative and outreach components, (i.e., non-engineering components) designed to prevent or minimize human exposure to groundwater within the ICB. Reports and plans prepared by the ALDOT and approved by ADEM to document CBP activities are shown on Figures 2-1A and 2-1B. A revision to the Institutional Control Plan was submitted to ADEM in October 2016 and is pending review.

### **2.1 Permanent Deed Restrictions**

The primary legal component of the ICP is a permanent deed restriction for each parcel of real property within the ICB. The restriction prohibits access and/or use of groundwater associated with the parcel without the express approval of ALDOT (hereinafter “Deed Restriction”). Deed Restrictions for some ICB properties were conveyed to ALDOT as part of a court-approved settlement of legal proceedings, and Deed Restrictions for other properties not included in the referenced legal proceedings have been obtained by private treaty agreements (“Covenants”) between the property owner and ALDOT. After execution by the property owner and/or his legal representative and conveyance to ALDOT, the document describing the Deed Restriction for each property has been recorded in the official land records maintained in the Office of the Judge of Probate (OJOP) of Montgomery County. There, the Deed Restriction, which expressly provides that the encumbrance “runs with the land” in perpetuity, is indexed to provide legal notice of the groundwater access/use restriction to anyone having a present or future legal interest in the subject parcel of real property.

The ICB contained 2,198 parcels of real property at the time it was originally established in 2006. Taking into account subsequent splitting and/or merger of specific parcels by owners since 2006, and ALDOT’s acquisition of two (2) parcels of property adjacent to the Southwest Treatment Area in 2014 (which are now included in the ICB), at the end of 2016, the ICB contains 2,196 parcels of real property. To date, Deed Restrictions have been executed, recorded and indexed in the OJOP for 2,164 parcels within the ICB (almost 99% of the individual parcels of real property within the ICB and 99% of the total acreage of the ICB).

A list of properties within the ICB that have a recorded Deed Restriction that prohibits access/use of groundwater without ALDOT approval is provided on Table A1 in Appendix A.1. The parcel count within the ICB will be updated annually in future reports.

## SECTION 2

### INSTITUTIONAL CONTROLS

#### **2.2 City of Montgomery Ordinance**

On May 17, 2016, the City Council of the City of Montgomery adopted ordinance 22-2016, which became effective following a public notice on May 26, 2016. The ordinance was specifically written to prohibit drilling of wells in the area of the Coliseum Boulevard Plume, by making it unlawful for any person or entity to dig or drill any well or otherwise access the groundwater within the institutional control boundaries of the Coliseum Boulevard Plume without the express, written approval of the City. A copy of the ordinance is included in Appendix A.2. This ordinance provides a restriction on all public-use property (such as City Streets) and the properties on which a restrictive covenant has not been recorded.

#### **2.3 Institutional Control Program Activities in 2016**

During 2016, ALDOT's continuing efforts to obtain Deed Restrictions for ICB parcels for which a Deed Restriction has not been executed and recorded resulted in execution and recordation of 5 additional Deed Restrictions on access/use of groundwater. Surface water elevation restrictions on ponds on parcels of property abutting the Southwest Treatment Area (SWTA) and immediately west of the ICB were obtained in 2014. Pursuant to these restrictions, the surface water elevation in the ponds cannot be lowered below 130.00 feet above mean sea level (ft. amsl) without approval by ALDOT (see Appendix A.3). In addition, ALDOT continued on-going review of land transaction records involving properties within the ICB to ensure continued enforcement of the recorded Deed Restrictions.

#### **2.4 Efforts to Obtain Deed Restrictions on Properties Not Presently Subject to a Groundwater Access/Use Deed Restriction**

As previously noted, ALDOT has obtained and recorded Deed Restrictions on almost 99% of the properties within the ICB (see Table A1 in Appendix A.1). A list of properties within the ICB for which ALDOT has not obtained an executed Deed Restriction is provided in Table A2 in Appendix A.1. During 2016, ALDOT attempted to contact the owners of each of these properties to provide them with information about the CBP, and to make offers to compensate them in exchange for their agreement to execute and convey to ALDOT a groundwater access/use Deed Restriction.

The parcels for which ALDOT has obtained the Restrictive Covenants within the ICB are shown on Figure A in Appendix A.1. As of December 31, 2016, 32 properties do not have a restrictive covenant executed (see Table A2 in Appendix A.1). The City Ordinance now covers those properties. Since ALDOT has made significant effort for many years to execute a covenant on each property, ALDOT proposed in an October 2016 revision to the Institutional Control Plan to discontinue efforts to obtain Restrictive Covenants on those specific properties. However, if an owner of a property without an executed Restrictive Covenant contacts ALDOT, ALDOT will execute the Covenant and compensate the owner in the same manner as other previously executed properties. In addition, ALDOT will provide the Department of Revenue a list of

## SECTION 2

### INSTITUTIONAL CONTROLS

unexecuted properties. If one of those properties is transferred to the Department of Revenue through a tax sale, the Department of Revenue will contact ALDOT and execute a covenant for that property.

#### **2.5 Efforts to Maintain Enforceability of Deed Restriction**

ALDOT monitored documents related to the sale, transfer and/or mortgage of properties within the ICB and other records of legal process at the OJOP, Montgomery County Tax Assessor's Office (MCTA) and the United States Bankruptcy Court to identify actual or contingent transfers of ownership of ICB properties and to assess whether the legal transfer document(s) to a "new owner," whether by deed or Bond for Title (BFT), was properly cross-indexed at the OJOP to the previously recorded and indexed Deed Restriction applicable to the property. To facilitate this determination, ALDOT conducted the following tasks:

##### **2.5.1 Transfer of Ownership by Deed**

- a. For each ICB property for which a transfer of ownership by deed occurred in 2016, ALDOT reviewed the deed recorded at OJOP to ascertain whether the 2016 deed was properly cross-indexed to the Deed Restriction prohibiting groundwater access/use that was previously indexed against the previous deed(s) for the property;
- b. Created and provided to OJOP a list of ICB properties for which a transfer of ownership by deed occurred in 2016 that denoted the street address and OJOP file stamp designation (i.e., date, book and page number in land records) for the previously recorded and indexed ICB Deed Restrictions for each transferred property. This was done to ensure that the OJOP would have all information needed to cross-index a Deed Restriction to the new document of ownership (i.e., deed or BFT) recorded for the subject parcel of property. See ICP Forms 1A, Appendix B and 2A, Appendix C;
- c. In or around July 2016 and January 2017, ALDOT provided written, express notice of the Deed Restriction for a specific ICB property to the person/entity who took ownership of an ICB property during the preceding six months of 2016 (see ICP Forms 2A and/or 2B in Appendix C).

##### **2.5.2 Transfer of Ownership by Foreclosure**

- a. ALDOT searched OJOP records and legal notices published in the Montgomery Advertiser and the Montgomery Independent to identify foreclosures of properties within the ICB during 2016;
- b. Reviewed OJOP records of each identified foreclosure to determine if the foreclosure deed, when recorded, was properly cross-indexed to the Deed Restriction;

## SECTION 2

### INSTITUTIONAL CONTROLS

- c. Created and provided to OJOP a list of ICB properties foreclosed in 2016, denoting the street address and OJOP file stamp designation (i.e., date, book and page number in land records) for the previously recorded and indexed ICB Deed Restrictions for each foreclosed property. This was done to assure that OJOP would have all information needed to cross-index the Deed Restriction to the new deed resulting from foreclosure;
- d. Provided to each individual or entity taking ownership of a foreclosed ICB property in 2016, a written, express notice of the applicable Deed Restriction for the property;
- e. Provided written, express notice of the applicable Deed Restriction to the attorney representing the foreclosing party involved in the transfer of ownership of an ICB property that was foreclosed in 2016. Such notice was sent in conjunction with the semi-annual and annual reviews typically issued in or around July 2016 and January 2017;
- f. Documented the foreclosure review findings for ICB properties. See ICP Forms 1A, 1B in Appendix B, and 2A, 2B, 2C and 2D in Appendix C.

#### **2.5.3 Transfer of Ownership by Bond For Title Agreement**

- a. ALDOT searched records of OJOP and MCTA to identify BFT agreements for ICB properties recorded and indexed in 2016;
- b. Reviewed each BFT agreement recorded in 2016 to determine if the BFT was properly cross-indexed to the applicable Deed Restriction for the property;
- c. Created and provided to OJOP a list of BFT agreements for ICB properties recorded in 2016, denoting the street address and OJOP file stamp designation (i.e., date, book and page number in land records) of the ICB Deed Restrictions recorded and indexed at the OJOP. This was done to assure that OJOP would have the information necessary to cross-index a Deed Restriction to the new BFTs (see ICP Forms 1A and 1B in Appendix B);
- d. Provided express, written notice of the applicable Deed Restriction (see ICP Forms 2E or 2F in Appendix C) to each BFT purchaser of an ICB property in 2016. This express notice was provided in or around July 2016 and January 2017 for those BFT purchasers who recorded BFTs in the six months preceding the July or January notice date. Documented results of the calendar year BFT review are provided on ICP Form 1A and Form 1B in Appendix B, and Forms 2E and 2F in Appendix C.

## SECTION 2

### INSTITUTIONAL CONTROLS

#### **2.5.4 Transfer by Tax Sale**

- a. ALDOT searched records of MCTA and the Montgomery Independent to identify tax sales of ICB properties occurring in 2016;
- b. Provided to each purchaser of a tax sale certificate for an ICB property in 2016 express, written notice of the Deed Restriction applicable to each specific ICB property. (See ICP Forms 3A or 3B in Appendix C).
- c. This express notice was provided in or around July 2016 and January 2017 for tax sales that occurred in the six months preceding the July or January notice date. Documented results of the calendar year tax sale review are provided on ICP Forms 1A and 1B in Appendix B, and Forms 3A and 3B in Appendix C.

#### **2.5.5 Transfer from Bankruptcy**

- a. ALDOT searched the Public Access to Court Electronic Records (PACER) database to identify individuals with a pending bankruptcy case who held ownership interest in an ICB property;
- b. Identified the bankruptcy trustee and attorney of debtor;
- c. Provided each with express, written notice of the Deed Restriction applicable to a property listed as an asset of the debtor's bankruptcy estate. This express notice was sent in or around July 2016 and January 2017 in conjunction with the semi-annual and annual reviews conducted in the six months preceding the July or January notice date. The bankruptcy review results are provided on ICP Forms 1A and 1B in Appendix B, and Forms 3C, 3D, 3E, 3F, 3G and/or 3H in Appendix C.

#### **2.6 Random Review of Institutional Control Boundary Property Records**

The ICP provides that ALDOT will annually review a random sample of the OJOP records of ICB properties that were not determined to be subject to a property transfer via deed (see Section 2.4.1), foreclosure (see Section 2.4.2), or bond for title transfer (see Section 2.4.3) to assure that recorded Deed Restrictions on these properties remain properly indexed to provide legal notice to those who might have a present or future interest in an ICB property. Land-related transactions resulting from tax sales (see Section 2.4.4) and bankruptcies (see Section 2.4.5) are not filed in the OJOP until the transferee records a new deed, and thus properties related to those transactions are included in the body of properties used for the random sample review. Pursuant to the procedures set out in the ICP, if the annual review of a 10% random sample reveals inadequate or improper indexing of the Deed Restriction to the effect that proper constructive notice of the Deed Restriction is not evident to those having a present or future interest in a specific ICB property,

## **SECTION 2**

### **INSTITUTIONAL CONTROLS**

---

ALDOT must review all ICB property records to assure that proper indexing and notice of the Deed Restriction is accomplished. The results of the 2016 calendar year random review are provided below:

#### **2.6.1 Random Review Results**

In 2016, ALDOT reviewed OJOP records for 201 ICB properties and determined that the Deed Restriction for each property was properly indexed to provide constructive notice of the Deed Restriction to anyone with a present or future interest in the subject property. The results of the random review are provided on ICP Form 1B in Appendix B.

#### **2.7 Notifications and Review**

ALDOT continued efforts to assure there was no unauthorized access to groundwater within the ICB during 2016. Pursuant to that effort, ALDOT maintained contact with agencies and organizations responsible for monitoring and/or issuance of permits to those entities or individuals who gave notice of intent to drill wells or perform activities that could reasonably result in contact with groundwater within the CBP. This information is documented on Form 4 in Appendix C, and the list of organizations and contacts is included in Appendix C. Additionally, annual notice to stakeholders (Appendix C Forms 8A and 8B) was mailed in November 2016. Findings for 2016 are presented below.

##### **2.7.1 Alabama Geological Survey**

Activity: Contacted Ms. Amye Hinson, who manages the digital images of “Notification of Intent to Drill a Water Well and Certification of Completion” forms for the Geological Survey. Ms. Hinson reviewed her records of these forms for 2016. Additionally, ALDOT requested that the Geological Survey add a Geographic Information System (GIS) layer of the CBP. After the layer is added, the Geological Survey will contact ALDOT if a well is proposed in the CBP area.

Finding: No new wells proposed or constructed within the ICB.

##### **2.7.2 Alabama Department of Environmental Management**

Activity: Reviewed Intent to Drill forms submitted to ADEM.

Finding: ADEM records did not reflect any proposed or constructed water wells within the ICB in 2016.

## SECTION 2

### INSTITUTIONAL CONTROLS

#### **2.7.3 City of Montgomery Plumbing, Gas, and Mechanical Department**

Activity: Based on the passage of City Ordinance 22-2016, the City will not permit a well in the Coliseum Boulevard Plume area without express approval from the City. Ms. Cindy Thompson, Office Manager for the City's Plumbing, Gas, and Mechanical Department, reviews application for approval to drill within the City of Montgomery which encompasses all of the ICB. A GIS layer has been added to the City Permit System to alert the City if a well is proposed in the CBP. Ms. Thompson and coworkers are aware that no wells are to be permitted for drilling within the CBP without approval of ALDOT.

Finding: There was no application for drilling a new well within Zip Code 36110, i.e., within the ICB, during calendar year 2016.

#### **2.7.4 Contact with Registered Well Drillers and Pool Installers**

Activity: In November 2016, notification letters (see Appendix C, Forms 9 and 10) were sent to well drillers registered with the State of Alabama and pool installers to inform them of the CBP and the Deed Restrictions that prohibit access to groundwater within the ICB without express approval of ALDOT. The letter also invited comment or questions. Copies of the notification letters were provided to ADEM.

Finding: ALDOT responds to comments and questions from registered well drillers and pool installers as needed.

#### **2.7.5 Summary of Findings**

Based on review of known private, state and municipal sources of information regarding intent to drill and construct water wells, no water wells were constructed within the ICB in 2016.

#### **2.7.6 Aerial Photography Survey**

Activity: In 2016, Google Earth Pro® was used to review publicly available satellite imagery. Images reviewed were generated during the following timeframes:

- September 2011
- September 2012
- February 2013
- November 2014
- May 2016

## SECTION 2

### INSTITUTIONAL CONTROLS

Finding: A comparison of the previously reviewed City of Montgomery Ortho-photographs from 2010 and 2012 comparing to the above satellite imagery did not reveal any new construction of structures/facilities within the ICB that would have resulted in contact with shallow-zone groundwater.

#### **2.7.7 Water Well Inspections and Surveys**

Activity: ALDOT has conducted frequent and on-going vehicular reconnaissance of roads and streets throughout the ICB for environmental monitoring and well-maintenance activities. A more focused, comprehensive reconnaissance was completed on February 22, 2016 and February 22, 2017 to supplement ALDOT's on-going observations of the ICB for possible unpermitted water wells. Southern Earth Sciences (SES) representatives visited eight (8) parcels listed in ALDOT records where inactive water wells were reported. The visits were intended to confirm the presence of a well and to determine if the well was active or inactive. Well-type structures were only observed at five of the eight properties on February 22, 2017. SES representatives spoke to residents at two of the houses and left notices when no one was home. Letters were mailed to property owners at each address where a suspect unused well was present. (See Form 11 in Appendix C).

Findings: There were no activities observed during the reconnaissance of the ICB area that could reasonably result in access to groundwater.

#### **2.7.8 Utility Notifications (Alabama 811 Call)**

Activity: Southern Earth Sciences (SES), contractor to ALDOT, subscribed to Alabama One Call (Alabama 811) in September 2010 to receive Alabama One Call notices of excavation or drilling. Alabama One Call notifies SES of utility location requests to excavate or drill within the ICB based on a geographic information system (GIS) shapefile of the area of the ICB. Alabama One Call information is recorded on Form 6, Appendix C. Table 2-1 provides a listing of the notifications and the findings are presented below:

Findings:

- In calendar year 2016, 193 notices of excavation within the general area of the ICB were received through the Alabama 811 Call program.
- Ten (10) notices were outside the ICB. No follow-up communication was made to the party giving notice of an excavation for those locations.

## SECTION 2

### INSTITUTIONAL CONTROLS

- The remaining one hundred eighty three (183) One Call notifications of excavations within the ICB (hereinafter “Caller”) were reviewed to determine whether there was the potential for access to groundwater at the excavation site. Callers were placed into either Group A or Group B. Group A included planned excavations which ALDOT determined were not likely to encounter groundwater. Group B identifies excavations where access to groundwater could potentially occur.
- One hundred eight three (183) Callers were placed in Group A. Examples of this type of excavation included cable installation where the maximum depth of excavation was one foot or less, or construction of a fence or deck where the excavation was a post hole or support with a maximum depth of 3 feet.
- There were no calls placed in Group B in 2016, i.e., excavations that could potentially access groundwater.
- ALDOT emailed or attempted to telephone each Caller and provided information of the approximate depth to groundwater at the work site and the CBP website address to obtain further information about the CBP.
- An example notification response is provided on Form 6 in Appendix C. All Form 6 notifications are provided in PDF on the report compact disk (CD).

#### 2.7.9 Area Reconnaissance & New Construction

Activity: ALDOT continued its on-going program to make periodic observations throughout the ICB to identify activities that may result in changes in land cover from development, construction, or other activities that could reasonably result in access to groundwater. (See Form 7, Appendix C)

- The City added a notification flag to the City GIS-system for properties in the ICB and developed a procedure to notify ALDOT when a building permit application is submitted within the ICB. This automated notification system became operational in December 2015. In March 2016, representatives of ALDOT met with the City to explain the purpose of checking the building permits and set up an email notification process. The permit staff has access to a map with a GIS layer showing the Coliseum Boulevard Plume. If a permit comes in for that area, they will notify ALDOT and place a 48-hour hold on the permit, unless the permittee can demonstrate that they have an 811 ticket. ALDOT will review the proposed project to ensure proper notices are given and contact the permittee directly, if needed. On February 17, 2017, Patrick McGilberry in the City Building Department was contacted and he confirmed that the Notice procedure was in effect.

## SECTION 2

### INSTITUTIONAL CONTROLS

**Findings:** No consequential changes in land cover, land use, storm-water conveyances, demolitions, or major modifications to the land were observed or identified in building permit applications that could reasonably result in access to groundwater.

ALDOT reviewed Montgomery Water Works and Sanitary Sewer Board's construction plans for sewer rehabilitation to verify plans that all soil and groundwater would be managed properly.

## SECTION 3

### CORRECTIVE MEASURES EFFECTIVENESS

#### **2016 Water Sampling Results**

##### **Kilby Ditch / Low-Lying Area**

TCE surface water concentrations collected during 2016 were reviewed. Concentrations were within the expected range of concentrations.

In the Low-Lying Area, TCE concentrations in samples from Low-Lying Area (LLA)-1 ranged from non-detect to 2.8 micrograms per liter ( $\mu\text{g/L}$ ), and are representative of TCE concentrations in the Kilby Ditch base flow prior to entering the wetland treatment area. TCE concentrations in samples discharged from the wetland treatment area were non-detect which verified the effectiveness of the remedial processes in the wetland treatment system. The analytical results are shown on Table 3-1a.

Sample locations LLA-9, LLA-10 and LLA-11 are south of North Boulevard and north of the Russell Distribution Facility. Surface water from this area flows under North Boulevard and into the Low-Lying Area and the wetland treatment system. Concentrations at LLA-9 ranged from 9.9  $\mu\text{g/l}$  to 27.5  $\mu\text{g/l}$  indicating an increase over concentrations measured in 2015, however, additional treatment at LLA-4 is effectively reducing the concentrations. Rip-rap was added at LLA-4 in November 2014 to enhance aeration. Surface water at LLA-4 had TCE concentrations that ranged from 4.4  $\mu\text{g/L}$  to 16.4  $\mu\text{g/L}$ . Surface water samples from locations LLA-8 and LLA-7, which are downstream of LLA-4, contained reduced concentrations of TCE due to stream channel turbulence/aeration generated by J-Hooks and Cross-Vanes installed in the Lower Kilby Ditch (Figure 3-1 and Table 3-1a).

LLA-5 and LLA-6 are in the interceptor trench in the northern portion of the Low-Lying Area; TCE was not detected in water samples from these locations.

Surface water compliance point, Low-lying Compliance Point (LLCP) -1, was sampled 26 times in 2016. Of those 26 samples, 13 contained small concentrations of TCE, ranging from 1.0  $\mu\text{g/L}$  to 3.7  $\mu\text{g/L}$ , which is well below the allowable monthly average TCE concentration of 37.38  $\mu\text{g/L}$  provided by the Agreement (Table 3-1b). Thirteen of the 26 samples collected at LLCP-1 were non-detect.

The corrective measures implemented for the Kilby Ditch / Low-Lying Area have intercepted the groundwater within the northeastern portion of the CBP and reduced TCE concentrations below the allowable discharge limit specified in the Agreement.

## SECTION 3

### CORRECTIVE MEASURES EFFECTIVENESS

#### **Southwest Treatment Area**

The SWTA is designed to maintain control of the groundwater in the southwest portion of the CBP by capturing the groundwater in the Dewatering Pond and pumping the water through a series of ponds (see Figure 3.2) to allow treatment before final discharge to a natural wetlands and the City of Montgomery's storm water drainage system pursuant to National Pollution Discharge Elimination System (NPDES) permit AL0081167 issued by ADEM. Water elevation in the Dewatering Pond is controlled by a pump that discharges the impounded water to the Transfer Pond. The Transfer Pond contains two pumps and a junction valve that permits discharge water to flow to the Discharge Pond and/or to the Auxiliary Treatment Basin (ATB). Discharge of water to the ATB will occur only if additional treatment of TCE is necessary. Any water directed from the Dewatering Pond to the ATB will be discharged after treatment in the Transfer Pond. Water from the Discharge Pond is released to flow by gravity to the Discharge Pond Ditch which empties into the natural wetlands, and subsequently to the City of Montgomery's storm water drainage system at the New Town floodgate (Figure 3-2).

Surface water samples were collected at locations Southwest Area (SWA) -1 through SWA-4 (see Figure 3-2) to evaluate the effectiveness of the SWTA corrective measure. In 2016, TCE concentrations in samples from SWA-1 ranged from 2.0 µg/L to 3.6 µg/L. There was no detection in samples collected from SWA-2 or SWA-4. Concentrations at SWA-3 ranged from non-detect to 1.9 µg/L. TCE results for all the SWA samples are provided in Table 3-2a.

The SWTA system surface water compliance location is designated as DSN001 under National Pollutant Discharge Elimination System (NPDES) permit AL0081167. The current NPDES permit was reissued on August 1, 2016 and will expire on July 31, 2021. Compliance samples are collected every two weeks to assess surface water quality. NPDES permit limits are 37.94 µg/L (daily maximum) and 17.47 µg/L (monthly average). TCE was not detected in any of the 26 compliance samples for DSN001 in 2016. Measurements of pH ranged from 6.04 to 6.95 Standard Units.

Surface water sampling downstream from DSN001 is not required by the Agreement, but samples were collected voluntarily from two downstream locations in 2016. Sample location Offsite 1 (O1) near Lower Wetumpka Road was selected as a representative site to evaluate the presence of TCE in water entering the southeast portion of the Natural Wetlands from off-site sources (see Figure 3-2). This portion of the Natural Wetlands also discharges through the New Town floodgate. Sample location Floodgate (FG) is at the New Town floodgate and samples from this location are used to assess water quality from all water that is discharged from the natural wetland to the City of Montgomery's storm water collection ditch. Table 3-2c shows results of surface water samples voluntarily collected from locations O1 and FG and analyzed for volatile organic compounds (VOCs). Benzene, toluene, ethylbenzene and xylene (BTEX) compounds were present in samples of runoff from off-site sources to the wetlands at sample location O1 during the January and April sampling events. These compounds are not associated with the CBP. No VOCs were detected at the New Town floodgate discharge.

## SECTION 3

### CORRECTIVE MEASURES EFFECTIVENESS

Based on the sample results collected in 2016, the SWTA corrective measures are successfully controlling and treating TCE in the groundwater captured from the southwest portion of the CBP.

#### **Bama Bud, Zoo Pond, Zoo Ditch and Three Mile Branch**

Results of surface water samples from the Bama Bud (BB), Three Mile Branch (TMB) locations, Zoo Ditch (ZD), and Zoo Pond (ZP) are provided in Table 3-3. Surface water sample locations for BB and TMB are shown on Figure 3-1 and sample locations for the ZD and ZP are shown on Figure 3-3. TCE was only detected one time at TMB-3 in April 2016. Samples collected in January, July and October 2016 did not contain detectable TCE. No other samples collected from BB, ZD, ZP or TMB contained TCE in 2016.

#### **3.1.2 Groundwater**

One hundred (100) wells (Tables 3-4a, 3-4b and Figures 3-4, 3-4a and 3-4b) within the CBP were monitored to evaluate the effectiveness of the corrective measures and compliance with the Agreement:

- Fourteen (14) Boundary Wells (BDY) were monitored for compliance at the perimeter of the ICB in January and July 2016.
- Eighty-four (84) Corrective Measures Effectiveness (EFF) wells were monitored within the ICB in January 2016 and 23 EFF wells were monitored in July 2016. As per the ADEM agreement on March 10, 2015, the EFF monitoring program was modified to reduce the number of EFF wells sampled during the July monitoring event;
- Two (2) Background Wells (BKG) were monitored in January 2016.

Average groundwater elevations and flow directions for the first and third quarters are shown on Figures 3-5a and 3-5b, respectively. Average groundwater velocities for 2016 are shown on Figure 3-6. Semi-annual groundwater elevations from wells within the ICB are provided on Table 3-6. TCE concentrations in samples of water from the EFF wells were compared to the Effectiveness Concentrations in Table VIII.3.b of the Agreement to determine if the sample concentrations were below concentrations predicted by the Site Wide numeric model. Trends for EFF wells were also evaluated and presented in Appendix D.

Groundwater Protection Standards (GPS) in Table VIII.3.a of the Agreement were not exceeded at any of the BDY or BKG wells. Only trace amounts of Chloroform was detected in BDY-8, BDY-10, BDY-12 and BDY-13, a common disinfection byproduct found in potable water and wastewater. TCE concentrations in groundwater samples from BDY Wells were all non-detect, and therefore, less than the GPS of 5 ug/L. Boundary well concentrations are reported in Table 3-4a.

## SECTION 3

### CORRECTIVE MEASURES EFFECTIVENESS

An isoconcentration map for TCE is provided for First Quarter 2016 as Figure 3-7. Figure 3-8 presents TCE concentrations for the Third Quarter 2016 sample results. Analytical results of groundwater samples from the Background and Effectiveness Wells are presented in Table 3-4b.

Representative isoconcentration maps could not be produced for other Constituents of Concern (COCs) because of variable and inconsistent detection of COCs in the groundwater samples. Figures 3-9 through 3-26 depict concentration ranges for the other COCs. With the exception of one well, Monitoring Well (MW) - 357, TCE did not exceed the Effectiveness Concentration for any of the effectiveness monitoring wells (see Table 3-4c). MW-357 was monitored quarterly because of this exceedance. Data for MW-357 are summarized in Table 3-4d. MW-357 was constructed within 50-feet of a former production well installed by the City at the Montgomery Zoo in 2004, which was subsequently abandoned and grouted in 2006, upon discovery by ALDOT. The TCE that exceeds the EFF concentration in water samples from MW-357 is attributable to the construction and past operation of the former production well. A discussion of the former Montgomery Zoo production well and occurrences and trends of TCE at MW-357 are presented in Appendix E. MW-357 will be monitored quarterly until TCE is below the Effectiveness Concentration for this well.

Six COCs: cis-1,2-dichloroethene, vinyl chloride, chloroethane, chloroform, 1,1-dichloroethane, and tetrachloroethane; were not found to exceed the GPS in any well.

Three COCs (carbon tetrachloride, 1,1-dichloroethene and methylene chloride) were found in groundwater samples from one or more monitoring wells in concentrations that exceed the GPS. However, these COCs were not found in every monitoring well that contains TCE, and when found at all, the concentration(s) of these COCs are significantly less than the corresponding TCE concentrations in the groundwater. Thus, TCE remains the primary COC for the CBP.

#### **3.2 Engineering Controls**

##### **3.2.1 Kilby Ditch / Low-Lying Area**

Engineering controls in the Kilby Ditch and Low-Lying Area include fencing and installation of rip rap. The fences have locking gates and signs. The rip rap is installed along the channel bottom and lower channel banks in the Kilby Ditch between North Boulevard and the confluence with the West Kilby Ditch underground storm water culverts. These engineering controls, which are inspected monthly, remained in good condition throughout 2016.

ALDOT performed several maintenance activities in the Kilby Ditch / Low-lying Area in 2016, including:

- Routine grass mowing;
- Maintenance of access roads;

## SECTION 3

### CORRECTIVE MEASURES EFFECTIVENESS

- 
- Repair of fences and gates;
  - Maintenance of signs;
  - Demolition of beaver dams;
  - Repositioning of rocks displaced during storm event.

In late December 2015, a 50-year storm event in the Montgomery area resulted in a high discharge (i.e., flood) through the Lower Kilby Ditch. Following this storm event, the Kilby Ditch segment between North Boulevard and the first cross-vane sustained damage. Rip rap in this portion of the Kilby Ditch was displaced from the channel bottom, a scour-hole developed behind the first cross-vane that resulted in displacement of stones in the first cross-vane (the top portion of the stones on the first cross-vane were out of position and the vane is unable to divert base flow from the Kilby Ditch to the Constructed Wetlands). In addition, sediment was deposited in the inlet to the Constructed Wetland further preventing base flow into the Constructed Wetlands. Corrective measures to repair the damage was implemented in April and May 2016 under the maintenance requirement of the United States Army Corps of Engineers (USACOE) Nationwide 38 Permit for the project. The rock structures were replaced and the sediment deposited in the mouth of the Constructed Wetland was removed. Base flow was rerouted into the Constructed Wetland, as designed.

Monthly inspection forms for the Kilby Ditch / Low-Lying Area and the SWTA are provided in Appendix F. Items identified during the inspections that need repair or maintenance, such as, mowing, fencing, locks, signs or vegetation control are scheduled for attention with the ALDOT Equipment Bureau, or Montgomery Area Engineer's Office.

#### **3.2.2 Southwest Treatment Area**

Engineering controls in the SWTA include property access restriction along the perimeter of the SWTA and groundwater capture in the southwest portion of the CBP. Specific engineering controls implemented or maintained are:

- A chain-link fence with locking gates surrounds the perimeter of the SWTA. The condition of the entire fence is inspected monthly. Warning signs are posted on the fence.
- The southwest portion of the CBP is captured and controlled by pumping from the Dewatering Pond. During 2016, the average water level in the Dewatering Pond was 116.65 ft. amsl.
- Water from the Dewatering Pond is pumped to the Transfer Pond.

## SECTION 3

### CORRECTIVE MEASURES EFFECTIVENESS

- Water from the Transfer Pond is pumped to the Discharge Pond and released to flow by gravity via the Discharge Pond Ditch to the naturally occurring wetlands.
- Equipment in the SWTA includes:
  - A pump and floatation barge in the Dewatering Pond and two pumps and a flotation barge in the Transfer Pond.
  - Control panels for the Dewatering Pond pump and the two pumps in the Transfer Pond. The pumps are automatically activated in response to the water level in each of the pond systems.
  - Telemetry systems for the Dewatering Pond and Transfer Pond. The telemetry systems record and transmit operating data of the pumps that can be checked remotely to monitor pump operations. Operation of the telemetry system in 2016 was intermittent due to damage from electrical storms. Pumps are operated manually when the telemetry system isn't working.
- The reported discharge from the Dewatering Pond based on the monthly discharge monitoring reports in 2016 is shown below:

Month/Year	Monthly Avg. (in million gallons per day)	Monthly Max (in million gallons per day)	Month/Year	Monthly Avg. (in million gallons per day)	Monthly Max (in million gallons per day)
Jan 2016	0.78	1.30	July 2016	0.84	1.30
Feb 2016	0.85	1.30	Aug 2016	0.86	1.30
March 2016	0.83	0.97	Sept 2016	0.87	1.30
April 2016	0.90	1.30	Oct 2016	0.88	0.90
May 2016	0.90	1.30	Nov 2016	0.70	0.89
June 2016	0.71	1.30	Dec 2016	0.88	0.90

The total estimated annual flow, based on the monthly averages, in 2016 for the Discharge Pond was 304.3 million gallons.

## *SECTION 3*

### CORRECTIVE MEASURES EFFECTIVENESS

---

#### **3.3 Effectiveness of Corrective Measures**

The groundwater levels and TCE trends demonstrate that the extent of the CBP has decreased by greater than 20 percent following construction and operation of the Southwest Treatment Area, Kilby Ditch, and Low Lying Area remedial measures.

#### **3.4 Regulatory Review Update**

The U.S. Environmental Protection Agency (USEPA) has made technical documents and tools available to support the ongoing development of its Subsurface Vapor Intrusion Guidance. ALDOT used the EPA vapor intrusion screening level (VISL) calculator to determine groundwater screening levels for vapor intrusion. The soil vapor study performed by ALDOT in 2002-2003 found no significant risk for vapor intrusion. In October 23, 2013, in response to ADEM comments, ALDOT agreed to continue to monitor TCE trends in shallow groundwater for comparison to the concentrations measured in 2002. TCE concentrations in shallow groundwater show an overall decreasing trend. The concentration at MW-125 showed a spike in January 2015, but concentrations were substantially lower in July 2016 and January 2017. Concentrations of TCE in groundwater samples from monitoring wells screened across the water table are shown in Table 3-5.

## SECTION 4 OUTREACH

### 4 Outreach

#### 4.1 Community Outreach

During 2016, efforts were made to educate the newly elected City Councilman and to identify new members to represent neighborhoods on the Community Outreach Group (COG). The goal was to fill a vacancy for the Vista View community and an alternate representative for the Chisholm community.

April 15, 2016 Met with newly elected City Councilman, Brantley Lyons, for overview of the Coliseum Boulevard Plume and to solicit his ideas for new members from Vista View and Chisholm communities. Councilman Lyons provided a contact at the City of Montgomery and a representative of the Vista View neighborhood group as sources to seek nominations.

June 13, 2016 Met with Charles Bass from the Vista View community for overview of the Coliseum Boulevard Plume. He agreed to be a member of the Community Outreach Group.

October 18, 2016 Conducted Community Outreach Group meeting and new member orientation for new representative from Vista View and new representative from Vista Terrace Apartments. Followed up with calls to members who were unable to attend.

- Showed recent drone videos of the project.
- City of Montgomery enacted Ordinance 22-2016
  - Prohibits drilling of any wells in Institutional Control Boundary without express written approval from City.
  - Existing ordinances 71-67 and 72-67 require a permit for any well drilled within the corporate limits.
- Also discussed updating the CBP webpage to make it more mobile device user friendly.

November 2016 Updated Coliseum Boulevard Plume stakeholders list with current contact information for email notices about the project.

#### 4.2 Public Meetings, Tours, Presentations, Weekly Newsletter

On November 16, 2016, ALDOT conducted a program for the Montgomery Area Association of Realtors (MAAR) to inform and update those involved in real estate transactions in the CBP.

ALDOT sent monthly newsletters by email to interested parties, members of the COG and other stakeholders in the CBP area. These newsletters provided details about upcoming project activities and notice of upcoming COG meetings. The newsletters are posted and archived on the CBP webpage.

## **SECTION 4 OUTREACH**

---

### **4.3 Information Website and Answering Services**

The CBP webpage was moved to a different host provider at the end of 2015 and web analytics was unavailable for 2016.

ALDOT promoted, maintained, and monitored a 24-Hour CBP Project Information Line.

### **4.4 Public Notices**

The City of Montgomery provided Public Notice of City Ordinance 22-2016, Prohibiting Drilling of Water Wells in the CBP area without approval from the City, in accordance with City procedures.

NPDES Permit Number AL0081167, for the ALDOT CBP Southwest Area, located at 1588 Concrete Drive, was placed on Public Notice for reissuance of discharges resulting from groundwater remediation, through DSN001 to the Alabama River, classified as Fish & Wildlife, in the Alabama River Basin. Notice of a 30-day comment period was published in the Montgomery Advertiser on June 15, 2016.

WHEREAS, Grantor understands that a significant reduction in surface elevation of any of the above-described Surface Water Impoundments could cause significant instability of the banks of the Surface Water Impoundment(s) and have a negative impact on the effectiveness of the CBP remediation plan; and

WHEREAS, that for and in consideration of the sum of One Dollar and no/100 (\$1.00) in cash paid by the Grantee to the Grantor, plus other good and valuable consideration, the receipt whereof is hereby acknowledged, and in further consideration of the mutual benefits accruing to the Grantor and the Grantee by the investigation and remediation of the CBP, and pursuant to the *Alabama Environmental Covenant Act (Code of Alabama 1975, §§ 35-19-1 to 35-19-14)*, the Grantor does grant, bargain and convey unto the Grantee and/or its successor agency the following:

1. A Deed Restriction that runs with the land in perpetuity on the portions of the ACI Properties that comprise one or all of the above-described Surface Water Impoundments, whereby Grantor and/or any successor in interest or bona fide purchaser for value of the ACI Properties or one or any of the above-described Surface Water Impoundments that lies on or within the ACI Properties forever in perpetuity is prohibited from taking any action that will cause the surface water elevation of any of the above-described Surface Water Impoundments to decrease to or below a level of 130.00 ft. above mean sea level ("amsl") without just cause, reasonable notice in writing, consultation with and the prior written consent of the Grantee. Grantee's approval will not be unreasonably denied

so long as Grantee reasonably determines that the final surface water elevation requested by Grantor, and the rate of reduction and/or methodology for accomplishing the lowering of the surface water elevation of the subject Impoundment(s) will not impair the effectiveness of the CBP remediation plan at the SWTA.

2. An Easement to, for and/or across the ACI Properties that runs with the land in perpetuity, whereby the Grantee or its successor agency or agents shall have reasonable access to and right-of-way to, over, on, upon, under, through and across all areas of the Surface Water Impoundments, which shall include the associated roads, banks and other associated areas, except improved appurtenant structures thereon, for purposes of investigation and/or remediation of the CBP ("Activities") which may include, but is not limited to: Inspection and collection of soil, groundwater and/or surface water samples from one or more of the above-described Surface Water Impoundments, which may require and include installation of wells and/or other structures to sample, observe, monitor, observe or measure soils, groundwater or surface water, or drilling to sample and assess the soils and geologic characteristics of the Surface Water Impoundments. Prior to entry, the Grantee and/or its agents will notify the Grantor of the nature of the Activities and determine a mutually convenient time to perform the Activities to avoid or minimize interference with Grantor's business activity and/or Grantor's ordinary use of the Surface Water Impoundments. Grantee will repair any substantive damage to either the improved and/or unimproved portions of the Surface Water Impoundments incident to the conduct of Grantee or its agents, and make reasonable efforts to return the damaged portion of the Surface Water Impoundment to the condition it was in prior to the conduct of the Activities.

3. A Release of and from any and all claims, demands, causes of action, suits at law or in equity, losses, damages, and any other claims of any nature which the Grantor may have now or in the future or which any successor in interest or bona fide purchaser for value of any one or more of the ACI Properties may have in the future against Grantee, the State of Alabama, the Alabama Department of Transportation, and/or its Director, officials, and employees, both in their official and individual capacities, and their agents, representatives, assigns or successors in interest arising from or related to, either directly or indirectly, the alleged presence of TCE, its breakdown components and carbon tetrachloride in the soil and/or groundwater and/or surface water on and/or beneath the ACI Properties.

**To Have and to Hold the same unto the said Grantee, the Alabama Department of Transportation, an agency of the State of Alabama, its Director, employees, successors and assigns, for the uses and purposes for which said Environmental Covenant with Deed Restriction, Easement and Release To Run With The Land ("Covenant"), a legal instrument executed pursuant to the Alabama Uniform Environmental Covenants Act (Code of Alabama 1975, §§ 35-19-1 to 35-19-14), is granted, now and forever more, unless and until expressly waived and released by the Grantee, and it is expressly understood and intended that the said Covenant is intended to be and shall run with the ACI Properties and shall be perpetual and binding on any successive owner, lessee, invitee or licensee of the ACI Properties.**

Re: Notice of Covenant on [Property Address], Montgomery, AL 36110

You are receiving this letter because records at the Montgomery County Probate Office and the Montgomery County Tax Assessor's office indicate that you have become an owner of the property at [Address of Property]. This property is located in an area known as the Coliseum Boulevard Plume (CBP), an area where the groundwater contains trichloroethylene (TCE), a common solvent that leaked from the sewer system into the groundwater near the Alabama Department of Transportation (ALDOT) asphalt test facility. To prevent exposure to the groundwater (the water 10-50 feet or more below land surface), ALDOT obtained a Covenant on this property that restricts access and use of the groundwater beneath the property without the express approval of ALDOT, and provides an easement for ALDOT to come onto the property for its work incident to investigation and remediation of the CBP. The Covenant is recorded and cross-indexed to the deed to this property at the Montgomery County Probate Office.

If, at any time, you wish to make an excavation on your property that may cause contact with the groundwater beneath the property, please contact the CBP Program Administrator to discuss your plans. If you sell your ownership interest in the property, please ensure that the new owner is given appropriate notice of the Covenant, and make sure that any deed to the property includes an appropriate reference to the Covenant.

The CBP website at [www.coliseumboulevardplume.com](http://www.coliseumboulevardplume.com) provides detailed information about the CBP. If you have questions about the CBP or the Covenant, you may call the CBP 24-hour information line at (334) 353-6635, email us at [cbpinfo@dot.state.al.us](mailto:cbpinfo@dot.state.al.us) or contact the CBP Program Administrator at (866) 488-1126 or Brandi Little with the Alabama Department of Environmental Management at (334) 274-4226.

Re: Notice for [Property Address], Montgomery, AL 36110

You are receiving this letter because records at the Montgomery County Tax Assessor's Office and the Montgomery County Probate Office indicate that you may claim an interest in the real property located at [Address of Property] through a bond for title agreement executed with [seller name] on [date]. This property is located in an area known as the Coliseum Boulevard Plume (CBP), an area where the groundwater contains trichloroethylene (TCE), a common solvent that leaked from the sewer system into the groundwater near the Alabama Department of Transportation (ALDOT) asphalt test facility. To prevent exposure to the groundwater (the water 10-50 feet or more below land surface), ALDOT is obtaining environmental covenants (Covenant) on properties in the CBP that restricts access and use of the groundwater beneath the property without the express approval of ALDOT, and provides an easement for ALDOT to come onto the property for its work incident to investigation and remediation of the CBP.

ALDOT will pay the owner of each property a fee in exchange for the Covenant. We would like to discuss the CBP and the Covenant for the referenced property with the owner of the property and you. Please call the Program Administrator at (866) 488-1126 or (334) 202-3355 to schedule a time we can visit with you in person or by telephone.

Reference: Alabama Department of Transportation  
Coliseum Boulevard Plume Institutional Control Program

The shallow groundwater (the water 10-50 feet or more below land surface) in an area in north Montgomery, Alabama (see attached map) contains concentrations of trichloroethylene (“TCE”). The area is commonly referred to as the Coliseum Boulevard Plume (“CBP”).

TCE is a common solvent often used in testing laboratories. Investigations of the CBP showed that waste TCE from an asphalt test facility of the Alabama Department of Transportation (“ALDOT”) leaked into the groundwater after it was discarded in the sewer system and/or the ground near the facility in accordance with manufacturer’s recommendations. To prevent exposure to the groundwater, ALDOT obtained from CBP property owners environmental covenants (“Covenants”) that contain a permanent deed restriction that prohibits access and use of the groundwater (for example, drilling a well or installing a swimming pool) without approval of ALDOT. The Covenants are recorded at the office of the Montgomery County Judge of Probate. Pursuant to the Alabama Uniform Environmental Covenant Act (Alabama Code §35-19-1, *et seq.*), the Alabama Department of Environmental Management (“ADEM”), is also authorized to enforce the deed restrictions on groundwater access and use. (*See* ADEM Admin. Code 335-5-1, *et seq.*).

If you have a project that will require you to drill or excavate in the CBP area at depths that may result in contact with groundwater, please contact ALDOT prior to the start of the project. We will promptly respond to discuss your project. If you confirm that your project may result in contact with the groundwater, we can provide information that may help you protect your workers and others from TCE exposure and prevent TCE contamination from entering the deeper aquifers. Also, we will send you periodic updates about the CBP as part of our on-going effort to involve and inform the community.

For more information about the CBP, you may visit our website at [www.coliseumboulevardplume.com](http://www.coliseumboulevardplume.com). If you have any questions or comments about the CBP, call the CBP 24-Hour Information Line (334-353-6635), email us at [cbpinfo@dot.state.al.us](mailto:cbpinfo@dot.state.al.us) or contact Adam Anderson with ALDOT at 334-206-2278 or Brandi Little with ADEM at (334) 274-4226.

Sincerely,

Scott W. George, P.E.

## Form 9 – LETTER TO WELL DRILLERS

[Date]

[Name of Well Driller]

[Street Address of Driller]

[City, State, and Zip Code of Well Driller]

Re: Restrictions on Drilling Water Wells within the Coliseum Boulevard Plume

Shallow groundwater in an area in north Montgomery, Alabama (see attached map) contains concentrations of trichloroethylene (“TCE”). The area, commonly referred to as the Coliseum Boulevard Plume (“CBP”), lies within the SW ¼ of Section 27, South ½ of Section 28, South ½ of Section 29, East ½ of Section 31, most of Section 32, and the North ½ of Section 33 of Township 17 North, Range 18East. (See USGS Survey 7½ Minute topographic map.)

The Alabama Department of Transportation (“ALDOT”), incident to its responsibilities for investigation and remediation of the CBP, has implemented an Institutional Control Program (“ICP”) to minimize exposure to the groundwater containing TCE and to prevent TCE contamination of deeper groundwater aquifers. As part of the ICP, ALDOT has obtained from property owners legally enforceable environmental covenants that include deed restrictions that prohibit access and use of groundwater beneath their property without prior approval of ALDOT. The environmental covenants are recorded at the office of the Montgomery County Judge of Probate. Pursuant to the Alabama Uniform Environmental Covenant Act (Alabama Code §35-19-1, *et seq.*), the Alabama Department of Environmental Management (“ADEM”), is also authorized to enforce the deed restrictions on groundwater access and use. (*See* ADEM Admin. Code 335-5-1, *et seq.*). The City of Montgomery enacted an ordinance (22-2016) in May 2016, that prohibits drilling of any wells in the Coliseum Boulevard Plume Institutional Control Boundary, without permission from the City of Montgomery.

If you have a drilling project in the CBP area, you must contact ADEM, ALDOT and the City of Montgomery prior to drilling. ALDOT will promptly respond to discuss your project and provide you with information so that you can develop a plan to protect you and/or others from TCE exposure and/or to prevent contamination of the deeper aquifers.

For more information, you may see our website at [www.coliseumboulevardplume.com](http://www.coliseumboulevardplume.com), call the CBP 24-Hour Information Line (334-353-6635), email us at [cbpinfo@dot.state.us.al](mailto:cbpinfo@dot.state.us.al) or contact Adam Anderson of ALDOT at 334-206-2278 or Shane Brown of ADEM at 334-274-4221.

Very truly yours,

Re: Notice of Groundwater Restriction within the Coliseum Boulevard Plume

The shallow groundwater (the water 10-50 feet or more below land surface) in an area in north Montgomery, Alabama (see attached map) contains concentrations of trichloroethylene (“TCE”). The area is commonly referred to as the Coliseum Boulevard Plume (“CBP”).

TCE is a common solvent often used in testing laboratories. Investigations of the CBP showed that waste TCE from an asphalt test facility of the Alabama Department of Transportation (“ALDOT”) leaked into the groundwater after it was discarded in the sewer system and/or the ground near the facility in accordance with manufacturer’s recommendations. To prevent exposure to the groundwater, ALDOT obtained environmental covenants (“Covenants”) from CBP property owners that contain a permanent deed restriction that prohibits access and use of the groundwater (such as, for example, drilling a well or installing an in-ground swimming pool) without approval of ALDOT. The Covenants are recorded at the office of the Montgomery County Judge of Probate. Pursuant to the Alabama Uniform Environmental Covenant Act (Alabama Code §35-19-1, *et seq.*), the Alabama Department of Environmental Management (“ADEM”), is also authorized to enforce the deed restrictions on groundwater access and use. (*See* ADEM Admin. Code 335-5-1, *et seq.*).

If you install a swimming pool in the CBP area that requires an excavation that may result in contact with the groundwater, please contact ALDOT prior to excavation. We will promptly respond to discuss your project. If you confirm that your project may result in contact with the groundwater, we can provide information that may help you protect your workers and others from TCE exposure and prevent TCE contamination from entering the deeper aquifers. Also, we will send you periodic updates about the CBP as part of our on-going effort to involve and inform the community.

For more information, you may see our website at [www.coliseumboulevardplume.com](http://www.coliseumboulevardplume.com), call the CBP 24-Hour Information Line (334-353-6635), email us at [cbpinfo@dot.state.us.al](mailto:cbpinfo@dot.state.us.al) or contact Adam Anderson of ALDOT at 334-206-2278 or Brandi Little of ADEM at (334) 274-4226.

Re: Notice of Covenant and Use Restrictions on Private Water Well at [Property Address],  
Montgomery, AL 36110

Dear [Property Owner Name]:

You are receiving this letter because records at the Montgomery County Probate Office and the Montgomery County Tax Assessor's office indicate that you are an owner of the property at [Address of Property] which is located in an area known as the Coliseum Boulevard Plume (CBP), an area where the groundwater contains trichloroethylene (TCE), a common solvent that leaked from the sewer system into the groundwater near the Alabama Department of Transportation (ALDOT) asphalt test facility.

To prevent exposure to the groundwater, ALDOT obtained a Covenant on this property that restricts access and use of the groundwater beneath the property without the express approval of ALDOT, and provides an easement for ALDOT to enter the property for its work related to the CBP. The Covenant is recorded at the office of the Montgomery County Judge of Probate. The ALDOT has oversight authority regarding wells within the CBP and groundwater within the CBP cannot be used without the express approval of ALDOT. Consequently, access to groundwater through the private well located on your property at [Address of Property] is prohibited.

The CBP website at [www.coliseumboulevardplume.com](http://www.coliseumboulevardplume.com) provides detailed information about the CBP. If you have questions about the CBP or the Covenant or have additional information about the well (for example if the well has been closed), you may call the CBP 24-hour information line at (334) 353-6635, email us at [cbpinfo@dot.state.al.us](mailto:cbpinfo@dot.state.al.us) or contact the CBP Program Administrator at (866) 488-1126 or Adam Anderson at 334-206-2278.

# **1. Introduction**

---

## **1.1. Introduction**

The Coliseum Boulevard Plume (CBP) Site is an area in north Montgomery, Montgomery County, Alabama that contains trichloroethylene (TCE) in the groundwater. Groundwater samples have been collected from monitoring wells at the CBP Site from 2001 through July 2016 to document TCE concentrations. As part of Long Term Monitoring (LTM), samples were collected from 100 monitoring wells in January 2016 and 35 monitoring wells in July 2016, in accordance with the LTM Plan (September 2014).

To develop valid statistical trends only wells with a minimum of eight sampling events with groundwater samples containing TCE concentrations above the reporting limit are evaluated. 52 wells that met this criterion provide information for qualitative and quantitative statistical evaluations to determine:

- Changes in TCE concentrations throughout the CBP Site.
- Effects of groundwater levels on TCE movement throughout the CBP Site.

Section 2 provides trends in TCE concentrations and effects of groundwater levels on TCE concentrations at the CBP Site. Section 3 presents the findings.

## **1.2. Purpose**

A groundwater model has been developed and calibrated for the CBP to predict changes in TCE concentrations and effects of groundwater levels on TCE movement. The model is also used to evaluate the effectiveness of corrective measures that are used to control, capture and treat TCE. Based on model predictions and review of historical data, TCE concentrations will change within the CBP. Annual TCE trend analyses are useful to verify that the TCE concentrations in groundwater, as determined by routine sampling and analysis, are consistent with model-predicted effectiveness concentrations.

A detailed description of the CBP groundwater model was provided in: “Site-Wide Model”, revised 2013. This report was prepared by the Alabama Department of Transportation (ALDOT) and submitted to ADEM as part of the 2012 Annual Report.

## 2. Temporal Changes in TCE Concentrations

---

### 2.1. Methodology

Time-series plots and introwell Shewhart-Cumulative Sum (CUSUM) control charts were used to evaluate the trends in TCE concentrations. TCE has been consistently detected only in samples from wells completed in the Shallow Zone (above the First Distinct Clay). Thus, trends are evaluated for only 100- and 200- series wells. The 100- series wells are screened in the upper part of the Shallow Zone (SZ). The 200- series wells are screened in the lower part of the SZ.

#### 2.1.1. Time-series Plots

Time-series plots for both TCE and groundwater levels, presented in Appendix D-1, provide for visual interpretation of trends.

#### 2.1.2. Shewhart-CUSUM Statistical Analysis:

The Shewhart-CUSUM statistical analysis provides two statistics that are based on comparison of recent monitoring results to baseline conditions established from the first four sampling events for each well. The Shewhart statistic represents the “short-term” trend relative to baseline; whereas the CUSUM statistic represents the long-term trend relative to baseline (the CUSUM statistic retains a “memory” of previous values because it is a summed statistic). The numeric values that determine statistical significance for the Shewhart and CUSUM trend methods are provided in Table D2-1.

**Table D2-1.  
Shewhart-CUSUM Tests for Significant Trend**

Statistical Significance	Shewhart Statistic	CUSUM Statistic
Significant Increase	> 4.5	> 5
No Significant Trend	<= 4.5 and >= -4.5	<= 5 and >= -5
Significant Decrease	< -4.5	< -5

### 2.2. Results

The wells used for the trend analyses are presented on Figure D2-1. Table D2-2 provides a comparison of the Shewhart and CUSUM statistics for data from the upper SZ and lower SZ monitoring wells. Statistical analyses for long-term trends (CUSUM statistic) and short-term trends (Shewhart statistic) indicate the following:

### CUSUM statistic (long-term trends)

- 65 percent of all monitoring wells evaluated in the trend analysis have either no trend (4%) or a decreasing trend (61%) in TCE concentrations.
- 26 percent of the upper SZ wells (100 series wells) have an increasing trend in TCE concentrations.
- 39 percent of the lower SZ wells (200 series wells) have an increasing trend in TCE concentrations.

### Shewhart statistic (short-term trends)

- 79 percent of all monitoring wells have either no trend (50%) or a decreasing trend (29%) in TCE concentrations.
- 11 percent of the upper SZ wells have an increasing trend in TCE concentrations.
- 27 percent of the lower SZ wells have an increasing trend in TCE concentrations.

**Table D2-2.**  
**Distributions of Trends in TCE Concentrations between Upper and Lower Shallow Zone Wells**

Well Screen Interval	Shewhart Statistics				CUSUM Statistics			
	Increase	No Trend	Decrease	Total	Increase	No Trend	Decrease	Total
SITE WIDE								
Upper SZ	11%	42%	47%	100%	26%	5%	69%	100%
Lower SZ	27%	55%	18%	100%	39%	3%	58%	100%
All Wells	21%	50%	29%	100%	35%	4%	61%	100%

Note: "Increase" and "decrease" are statistically significant trends.

The Shewhart (short-term trend) for each well is presented on Figure D2-2 and the CUSUM statistic for each well is presented in Figure D2-3. The values for the Shewhart and CUSUM statistics are provided in Appendix D-2. The wells with increasing trends in TCE concentrations are found only along the southwest-northeast axis of the CBP (Figures D2-2 and D2-3). This axis coincides with the dominant directions of groundwater flow. All the wells outside the dominant southwest-northeast groundwater flow directions have either have no trend or decreasing trends. This distribution in trends is consistent with changes in TCE predicted by the site wide model.

## 3. Findings

---

- Of the wells from which water samples contained TCE, 63 percent are lower SZ wells. Recharge from precipitation to the top of the aquifer causes stratification of TCE such that higher concentrations are near the base of the aquifer.
- Site wide, most groundwater samples from the wells exhibit TCE trends that are either decreasing or have no significant change. The trends coincide with the trends predicted by the numeric groundwater site-wide model.
- Increasing trends in TCE concentrations in groundwater samples from wells are along the southwest-northeast axis of the CBP, which coincides with the dominant directions of groundwater flow.
- TCE concentrations in groundwater samples from all wells outside the dominant southwest-northeast groundwater flow direction have either no trend or decreasing trends.

## **MW-357 Action Plan**

## **Monitoring Well MW-357 (City of Montgomery Zoo)**

MW-357 is one of two clustered monitoring wells installed March 2006 in response to the discovery and subsequent abandonment of a production well on the City of Montgomery Zoo property in 2006 (Figure E-1). MW-357 is screened across a thin, isolated, sand lens near the top of the Gordo Confining Unit beneath the First Distinct Clay. The other monitoring well, MW-457, is screened within the underlying Gordo Aquifer.

From the time of installation to January 2010, TCE concentrations in groundwater samples from MW-357 did not exceed 5 µg/L. From January 2010 to January 2011, TCE concentrations in groundwater samples increased to a maximum 103 µg/L in January 2011 followed by a decreasing trend through January 2016. TCE concentrations over the 2016 monitoring period have exhibited an increasing trend from 5.7 µg/L in January 2016 to 23.2 µg/L in October 2016 (see Figure E-2). As described below, temporary increasing TCE trends were anticipated but the overall long term downward trend is expected to continue.

The most likely source of the TCE is from the former Zoo production well that allowed groundwater from the overlying Shallow Zone to enter the isolated sand lens immediately beneath the First Distinct Clay (See Figure E-3). Abandonment of the production well in March 2006 effectively removed this pathway from the Shallow Zone to the Confining Unit, however, during operation of the well, it is unknown how much TCE containing groundwater was pulled down into this Confining Unit. Thus, the overall decreasing trend in TCE concentrations observed after January 2011 is expected to continue until TCE levels return to below 5 µg/L.

Information related to the transport pathway for TCE in groundwater from the Shallow Zone to the Confining Unit and lateral movement within the Confining Unit to MW-357 is summarized below and illustrated on Figure E-3:

- **Montgomery Zoo Production Well Construction and Operation**
  - Constructed in August 2004 and abandoned in March 2006.
  - Screen Intervals (see “*Summary Report for the Abandonment and Installation of wells at the Montgomery Zoo*”, 2006 for details):
    - 20 to 60 feet BGS (both Shallow Zone and Gordo Confining Unit).
    - 120 to 160 feet BGS (Gordo Aquifer).
  - Sand Pack / Grout unknown.
  - Used intermittently for irrigation. When used, pumped at 100 gpm.
  - 41.4 µg/L TCE in a sample of discharge water collected prior to abandonment.
    - The TCE was a blended concentration of groundwater from the Shallow Zone and the Gordo Aquifer.
  - Production well abandoned in March 2006 with bentonite by over drilling the original well to 145 feet BGS and grouting with bentonite to the surface.
- **Monitoring Well MW-357**
  - *Constructed March 2006, approximately 50 feet from the abandoned production well*

- Screen Interval: 54.5 to 63.5 ft BGS (sand pack 51.6 – 64.8 ft BGS)
  - Bentonite / Grout: surface to 51.8 ft BGS
  - TCE trends presented on Figure E-2.
  - Lithology screened by well:
    - 2 ½ foot thick, fine to medium sand near top of screen
    - intervening clayey, silty, sand
  - Overlying and underlying the screen interval is sandy clay
- Monitoring Well MW 457
  - Constructed March 2006, approximately 50 feet from the abandoned production well
  - Screen Interval: 122.85 to 147 ft BGS (sand pack 119.8 – 149.5 ft BGS)
  - Bentonite / Grout: surface to 119.8
  - TCE has not been detected in samples from March 2006 to January 2016
  - Lithology screened by well: fine to coarse sand and layers of sand and gravel
- Transport of TCE from the Shallow Zone to the isolated sand lens within the Gordo Confining Unit (Figure E-3, left panel):
  - Pumping dewatered the isolated sand lens and produced a strong downward hydraulic gradient from the Shallow Zone to the isolated sand lens within the Confining Unit.
  - Once the production well ceased pumping, vertical flow between the Shallow Zone and Confining Unit persisted until the isolated sand lens was re-saturated and hydraulic levels equalized.
  - Cyclic pumping resulted in alternating introduction and removal of TCE from the Shallow Zone to the isolated sand lens. During pumping phases, some TCE remained behind in pore water after the sand lens was dewatered. The TCE that remained behind in pore water during the alternate periods of pumping is responsible for the periodic increasing followed by decreasing TCE trends observed at monitoring well MW-357.
  - Abandonment of the production well in March 2006 removed the vertical flow.
- Transport of TCE within the isolated sand lens within the Gordo Confining Unit (Figure E-3, right pane):
  - Return to the “natural” hydraulic gradient results in minor advective movement of the residual TCE within the isolated sand lens.
  - Well purging and sampling for MW-357 induces a temporary artificial gradient from the abandoned production well site toward MW-357.
  - Quarterly sampling of MW-357 from March 2006 to January 2010 gradually moved TCE from the vicinity of the abandoned production well to MW-357.
  - TCE concentrations may have peaked at MW-357 in January 2011. There may be periodic increases in TCE at MW-357 but the downward trend is expected to continue.
  - Since the peak in January 2011 overall trends have been decreasing, with periodic short term increases, such as the increase observed in 2016, reflecting heterogeneity in the TCE concentration distribution.

With the short term increasing trend observed in 2016, quarterly monitoring for MW-357 will continue for 2017.

2	There is a beaver dam located in the ditch of the low lying area which extends from the overflow section. The water is beginning to back up in this ditch.	35
