CONSTRUCTION INFORMATION MEMORANDUM NO. 1-94

TO: Division Engineers

FROM: G. M. Harper *G. M. Harper*
Construction Engineer

RE: Wetland Mitigation Plans

Occasionally the Department is required to develop a given acreage of right-of-way as wetlands during the construction of a project. This normally involves special grading of an area and the planting of various types of trees.

We want to put forth a maximum effort to satisfy the wetland mitigation plan requirements. We are very interested in maintaining a good working relationship with the Corps of Engineers. Mr. John Shill, of the Design Bureau's Environmental Section, coordinates the Department's involvement with the Corps of Engineers for wetland mitigation.

On future projects containing a wetland mitigation plan, we ask that construction of the wetland mitigation area be coordinated with Mr. Shill. Please notify John when construction of the wetland mitigation area is ready to begin. He will be available during the construction phase to answer any questions which may arise. He will also need to perform an inspection of the wetland mitigation area prior to this work being accepted. John may be reached at 220-6132 (ATTNET) or 242-6132.

Your attention to this matter will be appreciated.
